Ignore Hormuz – 3 Energy ETFs That Can Rally No Matter What Happens

You're only going to get hurt if you try to predict whiplashing oil prices and fragile ceasefires. Instead of doing that, you could buy into energy ETFs like the **Invesco WilderHill Clean Energy ETF** ([NYSEARCA:PBW](#)), ... , and the

These are energy ETFs that are not dependent on the Strait of Hormuz, and they can perform whether or not oil is at \$60 or \$130. These ETFs are not invested in direct "upstream" oil plays. You're instead getting exposure to certain targeted sectors of the energy sector, like pipelines, shipping, and exploration, among others.

Building your energy exposure chunk-by-chunk instead of betting on crude oil itself or an oil producer is the smartest thing you can do today. The broader oil sector is set to grow, and geopolitics will make sure things work out your way in the end. Let's take a look at each of these ETFs in detail and how they can keep rising.

Invesco WilderHill Clean Energy ETF (PBW)

Clean energy is no longer forced onto the world, but it is now a necessity and a strategically smart choice. Oil is getting choked off and is expensive today. The mere risk of another

conflict in the Middle East can keep shipping and oil/gas costs high for decades. For countries in Europe and across Asia, clean energy is the only route forward.

... With hindsight, that has turned out to be a mistake, as clean energy will see far more demand over the coming years. The clean energy narrative initially gained steam after the oil crisis of the 1970s. This latest crisis will likely end up spurring a revival.

PBW is gaining from that already. It is up 118% in the past month. Most of the gains happened well before the current conflict, purely from organic demand alone.

PBW comes with a 0.64% expense ratio.
